DVF2000ER: Carrying out sensitive missions in extreme conditions

European leader in light tactical UAS

Agile solutions tackling large challenges

↗ 25 years of experience operating in all environments

Global security is about anticipation, adaptation and responsiveness. To face asymmetric threats, uncharted, sensitive and extreme operating environments, it is necessary to have multi-missions solutions able to:

- Perform intelligence, surveillance and reconnaissance missions
- Strengthen coastal surveillance
- Monitor high value targets (HVT)
- Measure and analyse battle damage assessments

Operating light tactical UAS enhances field and/or maritime capabilities to support decision making in operation.

DVF2000ER is a robust, long-lasting endurance solution adapted to fulfil missions from the field, rear base or coastal command post:

- 7 hours continuous flight
- Operating temperature up to 40° C
- Discreet for long range detection
- Real time day and night video
- 360 degree panoramic coverage
- Simple user interface
- Small logistic footprint
- Fully automatic recovery on a semi-prepared runway

SPECIFICATION

Endurance + 7 hours

Propulsion Thermic

Distance 50 km

Deployment time 40 minutes

Weight 23 kg

Payload Agnostic

In house gyro-stabilised full HD EO/IR or the ability to integrate 3rd party customer payloads

AIS (Automatic Identification System)

SURVEY Copter, an Airbus subsidiary since 2011, is a global pioneer in the design, production and operational support of light tactical UAS.
